

What is Q-Link?

Q-Link provides additional control functions between a TV and recording device (VCR/DVD Recorder), via the Scart lead.

Tuner Station Presets download (Analogue Tuners Only)

When connecting a new TV or DVD recorder/VCR to an existing unit, the tuner presets can easily be copied to the new unit. This process happens during auto-set-up of the new unit.

Direct TV Record

Press the “Direct TV REC” button to record what you see on TV. The recorder will switch on and begin recording the TV programme you are watching

Auto TV On

When the TV is left in standby, beginning playback from a DVD or Video tape switches the TV on and selects the correct AV input.

Auto Power Down

If the playback of a Video tape or DVD has finished and the device stopped, Switching the TV into standby will also switch the DVD Recorder/Video Recorder into Standby.

Check that the Correct Scart sockets on the Recorder and TV are connected. Refer to instructions for the correct Scart to use for Q-Link
